FOR IMMEDIATE RELEASE

KINGSTON, ON., July 5, 2022. - We are pleased to announce that Daniel R Shea & Associates Systems Group Inc (DRS) has been acquired and will be working alongside Telecom Metric Inc. (TMI) as well as our existing group of companies Server Cloud Canada (SCC) and Cloud Metric Inc. (CMI).

Our team is growing with new expertise and capabilities, greatly enhancing the overall services of our company. Our priority is to not only ensure that we maintain continuity and our current quality of service but also to provide you with a more robust set of products and services to meet your business's ever growing technological requirements. For you, this manifests as more support staff, with more in-house specialties, making for a smoother and more responsive support experience.

TMI, specializing in secure cloud hosted Unified Communications, operates as one of, not three, but four complimentary IT companies offering integrated service to all of our valued clients. The group of companies, now including DRS, will work together, each providing their own unique contributions, to give our customers a complete solution.

Server Cloud Canada is a private cloud environment, entirely Canadian owned and operated, compliant with all Provincial and Federal privacy laws. With nine evenly distributed data centers throughout Canada, the redundant platform enables automatic failover and backup and reduces the risks involved with internal IT management.

Cloud Metric specializes in managed cloud services, equipped with a team of experts in cyber security, cloud migration, and cloud management. CMI offers a suite of features such as cloud security, cloud backup and disaster recovery, monitoring & reporting, as well as Microsoft 365 licensing and support.

DRS concentrates their efforts on secure managed services. Their experience with on-premise infrastructure, accumulated since 1986, makes them true professionals when it comes to working directly with businesses and organizations to design and build IT infrastructure.

We look forward to what the future holds,

-The Telecom Metric Team
